

ACCESSORIES CATALOG

 **FORMASPACE**

HEIGHT ADJUSTABILITY ACCESSORIES

ELECTRIC CONTROL HYDRAULICS

The easiest and fastest way to adjust the height of a workbench is with an electric hydraulic. Just press the up or down arrow button. This option is ideal for environments that need to adjust the workbench height a few times a day or more such as multi-shift operations.

MANUAL CRANK HYDRAULICS

Add manual crank hydraulics to infrequently adjust the height of your workbenches. The hand crank mechanism takes slightly longer to adjust compared to the electric control option, but is the more economical option of the two. We recommend manual crank hydraulics for operations that need to adjust bench height once or twice a day.

ADJUSTABLE LEG KIT

Adjustable leg kits offer an inexpensive way to adjust the height of a workbench for increased ergonomics and productivity. It has an 11" travel range with 1" adjustment increments.

We recommend adjustable leg kits for users who need to adjust the height of the bench a few times per year. Manual or electric hydraulic options are recommended if daily or monthly adjustment is required.

ACCESSORIES

LAB SINKS

Formaspace offers different types and materials of sinks to accommodate specific laboratory requirements. Both drop-in and undermount sinks can be ordered as epoxy or stainless steel. Custom sizes are also available.

FAUCETS AND EYEWASHES

We have laboratory grade faucets for various applications. We also offer eyewashes for laboratory environments where lab technicians need to handle dangerous and caustic chemicals.

ESD KITS

ESD kits should be ordered along with ESD Workbenches if the operation requires electrostatic discharge and grounding the workers is required to protect the materials handled.

7-FLEX MONITOR MOUNT

Weight capacity is up to 17 lbs, and it moves in 7 different directions. Adjust your computer screen or TV monitor stance at your workstation with this easily articulated clamp on, or uni-strut mounted monitor arms.

LCD-4 MONITOR MOUNT

The LCD-4 monitor arms mount on vertical uni-struts above the work surface and let users move the monitors in four directions.

STATIC MONITOR MOUNT

The static monitor brackets mount to a horizontal bar that attaches to uni-struts on Benchmarx™ benches. Depending on the screen size and the workbench width, the monitor bar can host 2 to 4 brackets. Unlike 7-Flex and LCD-4, the monitors don't move in any direction. This mount is also available for heavy duty configurations that require carrying larger monitors or visual equipment.

POWER STRIP

The industrial quality power strips come in 24", 36" or 48" wide (8, 12, or 16 outlets). They are UL approved, offer 400 Joules of surge protection, 400-volt clamping voltage and a 15 AMP circuit breaker. Formaspace power strips are mounted on a steel bracket (24" to 96", 6" increments) or the bench frame depending on the location (above or below the work surface).

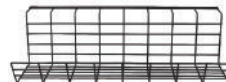

KEYBOARD TRAY

The retractable keyboard tray on ball-bearings slides out for keyboard access and remains hidden when not in use. It adds function & ergonomics to the workbench. It also helps to prevent wrist injury and keeps the keyboard from moving around.

CABLE MANAGEMENT

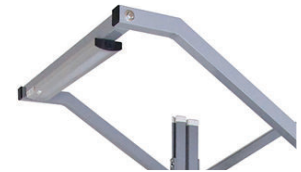

Minimize dangerous and unsightly wire clutter with a cable panduit. This is the management solution for routing and concealing wiring and is mounted under the work surface.

LIGHTING AND LAMPS

OVERHEAD LIGHT

The overhead light assembly mounts on a steel bar of 24" to 96" wide (in 6" increments) that then mounts to vertical supports so that the light hangs over the work surface for optimal lighting and working conditions. Formaspace overhead light options consist of 24" or 48" fluorescent bulbs in a standard lighting case with on/off switch and 40" power cord.

UNDERSHELF LIGHT

An undershelf light can only be added to Benchmarx™ and Bench Plus™. The light is attached underneath the upper shelves and cabinets to illuminate the work surface. The fluorescent options are 24" to 48" wide, and it contains one fluorescent bulb with on/off switch and 40" power cord.

MAGNIFYING DESK LAMP

The heavy duty magnifying lamp includes spring balanced tension bars for flexible adjustment to numerous positions. The light can also be locked into place at its joints. Magnification level is 3X. This attachment is ideal for computer repair, electronic manufacturing, assembly, oil and gas part repair centers, pharmaceutical labs, architectural schools, packing stations, and more.

ACCESSORIES

GROMMET

The standard 2.75" grommets accommodate most wiring needs from the work surface to relevant plugs. A simple solution for workstations where cable management and a clean appearance is essential.

METAL LOOP PARTITIONS

Interlocking loops allow for quick and easy assembly and disassembly. The shelves that are hosting these loop partitions can be made from a variety of surface materials depending on the specific needs of the project. Designed to be sturdy and durable, with the ability to withstand heavy use. Easily reconfigurable, allowing for changes to be made to the layout of space without the need for major construction work.

SHELF PARTITION PANELS

The panels are designed to create separate compartments for material handling facilities. These panels are typically made of metal and come in various sizes. Shelf partition panels increase the organization and storage capabilities of a shelf unit. By dividing the shelves into separate compartments, it becomes easier to store and access items of different sizes and shapes and prevents them from mixing together.

WORKBENCH SHELVING

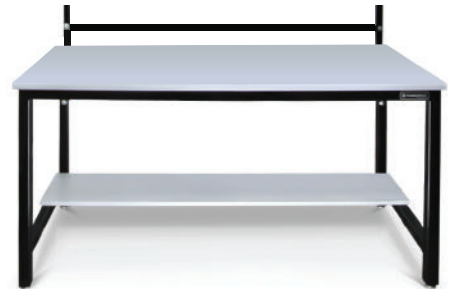

ADJUSTABLE SHELVES

Formaspace upper shelves are height adjustable steel-framed units mounted above the main work surface to the bench uprights. Shelves are available in the same standard surface materials and colors. The support bars match your frame finish color selection unless otherwise specified.

LOWER SHELVES

Free up the valuable workspace with Formaspace lower shelves. Lower shelves are perfect for printers, servers, and a variety of other bulky items that fit best under the work surface. Lower shelves may also serve as footrests depending on your material selection. The lower shelf runs the full width of the workbench. Shelves can be ordered in full depth or half depth, increasing in 3" increments.

ACCESSORIES

BIN RAIL

Keep small parts handy with convenient and inexpensive bin rails with bins!

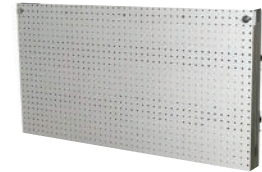

Bins are molded of high-strength polypropylene and freely mounted to the steel bar that is attached to the vertical support bars for maximum sturdiness and close proximity to the workstation user (bins are not included with the order).

Bin rails are a useful add-ons for assembly and material handling operations.

PEGBOARD

Pegboards offer an inexpensive solution for hanging tools and other frequently used items off the work surface and within arm's reach. Pegboards, best known for industrial uses, are also used in labs as drying racks when made of epoxy resin. Pegboards are available in 24" – 96" widths increasing in 6" increments. They are typically mounted to the vertical support bars on a Benchmarx™ or Bench Plus™. Standard Formaspace pegboards are constructed with perforated hardboard, steel, or epoxy.

Pegboards (Wall unit)

Pegboards mounted on walls can serve as a drying rack for lab beakers and glassware. By keeping these items within easy reach and clearly visible, researchers and technicians can streamline their work processes and reduce the risk of accidents or errors. The pegs are made of oval polypropylene and are vertically angled for support and drainage. The number of pegs as well as the width and height are customizable.

CPU BRACKET

The CPU Bracket mounts computers beneath the work surface. The support system features a double-arm for easy adjusting, an open back & sides for quick access and proper cooling. It holds up to 45 lbs and offers a sliding depth adjustment feature for adequate fit on many desktop PC sizes.

PENCIL LIPS

Pencil lips are attached to upper shelves (either flat or angled) and can help prevent tools and materials from rolling or sliding off the edge of the benchtop. Pencil Lips are a useful feature to keep a workspace organized and within easy reach while eliminating the risk of breaking things or falling items onto the work area.

ROLLER BAR

Store large rolls of paper, bubble wrap, and other supplies within arm's reach. Roller bars are mounted directly to the frame.

WORKBENCH FOOT OPTIONS

ADJUSTABLE LEVELERS

Levelers allow you to make incremental adjustments to your workbench if you have to place it on an uneven floor. They allow you to keep your work surface level and the work bench stable. Standard Duty – ½"-13 threaded stem, 500lbs ea. load rating.

ANTI-VIBRATION LEVELERS

Add anti-vibration levelers when you need to minimize vibration on a workbench that holds sensitive instruments like microscopes. ½"-13 threaded stem, 15 degree swivel, 500lbs ea. load rating.

TOTAL LOCK CASTERS

Add flexibility and mobility with total lock casters. Casters make reconfiguring your workspace easy. When applied, the locks keep wheels from rolling while simultaneously keeping the caster from rotating around the stem. Non-locking casters are also available if the mobility of the workbench is a priority.

Standard Duty – ½"-13 or 1"-13 threaded stem, steel ball bearing, 300 lbs ea. load rating, total locking (swivel & wheel).

Heavy Duty – steel ball bearing, 550 lbs ea. load rating, total lock (swivel & wheel).

ADJUSTABLE LEVELER & CASTER COMBO

When confronting mobility needs along with needs for maintaining a level work surface, look at our adjustable leveler and caster combo. This combo foot option allows you to move the workbench on the casters, then lock into place and level the work surface.

½"-13 threaded stem, non-locking, height adjustable via thumbwheel., 550 lbs ea. load rating.
